

Working in collaboration with Mitsubishi, we delivered a one-off installation project for SSHA (Meres & Mosses). This provided an Air Source Heat Pump programme to 47 properties, replacing existing electrical and oil fired heating systems. The designed solution ended fuel poverty for some residents, while maintaining storage space and ensuring user-friendly controls for older residents.

The delivery required installation of FTC4 SMART Controllers and was the first UK project of this size using SMART controllers. Mitsubishi selected Dodd Group to deliver the project because of our high quality service delivery and management approach.
