
PROJECT NAME:

Almarai, Central Processing Plant, Al-Kharj, K.S.A

M&E ORDER VALUE:

£15 million

Dodd Group and our sister company 3CL were successful in a combined bid to complete the design, installation and commissioning of the electrical and air conditioning systems for the construction of Almarai's new phase 2 central processing plant.

Our scope of works covered the complete air conditioning to process areas, comfort cooling to offices and laboratories, lighting, small power, low voltage distribution and the electrical relocation of the existing utilities plant to a new central location.

The installation was carried out to an exceptional standard mainly in stainless steel due to the hygiene standards of a food factory.
