
PROJECT NAME:

Clevehill Windfarm Connection

CLIENT:

National Grid Electricity Alliance
Central

LOCATION:

Kent

M&E ORDER VALUE:

£190,000

CONTRACTOR:

Morgan Sindall

This was a successfully delivered project to provide M&E services within a 400KV switch hall and associated control rooms including amenities rooms.

Design of the installation and logistics of delivering the project were managed around the requirements of the local parish council. The installation included standard equipment such as lighting, small power, fire alarm and intruder alarm systems but all of these had to be designed and installed around specialist areas such as ATEX rated battery charging rooms.

External lighting was also provided and with the capability of being controlled remotely from site.
